DETAILED ACTION

Allowable Subject Matter

1. Claims 22-48 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 22-27, 29-38, 39, 40, and 41 are allowable over the prior art for at least the reason the prior art fail to teach or reasonably suggest the left and right occluding apertures each being located in a common plane and being movable in the common plane to adjust the locations of the left and right occluding apertures as claimed in the claimed combination. The occluding apertures of Stevens are not movable in a common plane to adjust the locations of the left and right occluding apertures.

Claims 28 and 46-48 are allowable over the prior art for at least the reason the prior art fails to teach or reasonably suggest the plurality of pivotal pages, each having first and second opposite surface provided with the content, being configured so that the upright direction of the content is oriented towards the pivotal axis of the pages and the pages and the content support portion are compatibly configured to be releasably attached to each other to that the upright content of the first surfaces is oriented, attached, positioned, pivoted, and viewed sequentially with the viewer and then be released, reoriented, reattached, and repositioned to enable the upright content of the opposite second surfaces to be pivoted and thereby viewed sequentially with the viewer as claimed in the claimed combination.

Claim 41 is allowable over the prior art for at least the reason the prior art fails to teach or reasonably suggest adjusting the right lens together with and at the same time as the right occluding aperture and the left lens together with and at the same time as the left occluding aperture as claimed in the claimed combination. The prior art discloses adjusting lenses and occluding apertures independently from one another, but not together.

Claims 43-45 are allowable over the prior art for at least the reason the prior art fails to teach or reasonably suggest the viewer pivotal chassis including means for enabling the viewer to be movable in a first plane that is parallel to a second plane common to a surface of the content so that the content remains in focus during a scanning movement of the viewer in the first plane up and down a length of the content to facilitate optical conveyance of content having an image area greater in its entirety than is optically accessible with the viewer at one time. As shown in attachments XXXII and XXXIII, the structure of the pivotal chassis of Figures 29 and 30 of Jones (U.S. Patent 5,499,136) does not allow scanning of the content by moving the viewer in a plane while maintaining focus on the content during movement.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
